SE202 MOBILE PROGRAMMING · MIDTERM PROPOSAL

PUShare

Course materials for every NewUU major, in one place instead of a dozen Telegram groups.

Abduraxmon Qutbiddinov (lead) · Umar Toshqulov
Adxamjon Raimov · Oyatillo Axadjonov

Team Strangers · October 2026

The problem

NewUU students waste time hunting for slides, notes, practice exercises and past exams, because there is **no single, organised place** for them.

Telegram groups

Files buried under hundreds of messages, spread over many groups.

Hero LMS and course sites

Used for some courses, not others, and rarely for past years.

Classmates

Students end up asking around in chats to find one file.

Hardest of all: materials from previous semesters and other academic years.

What 19 students told us

100%
get course materials from Telegram (19/19)

94.7%
have had difficulty finding materials (18/19)

63.2%
missed a material before a quiz or exam (12/19)

57.9%
struggle daily or weekly (11/19); 26.3% spent over 30 min on one file

Source: our online survey of NewUU students, October 21–24, 2026 (n = 19). Full questions and answers in the document appendix.

Target users and scope

“NewUU students can't quickly find course materials for their major, because they're scattered across Telegram groups, Hero LMS and shared folders.”

Who it's for

NewUU students of every major and year who need materials for their own major, including past semesters.

What we know so far

Most respondents were 3rd-year Software Engineering students, so the evidence is strongest for that group.

The app and the main user flow

PUShare lets a student **find the material they need for a course in a few taps**, filtered by academic year, study year and course, without asking around in group chats.

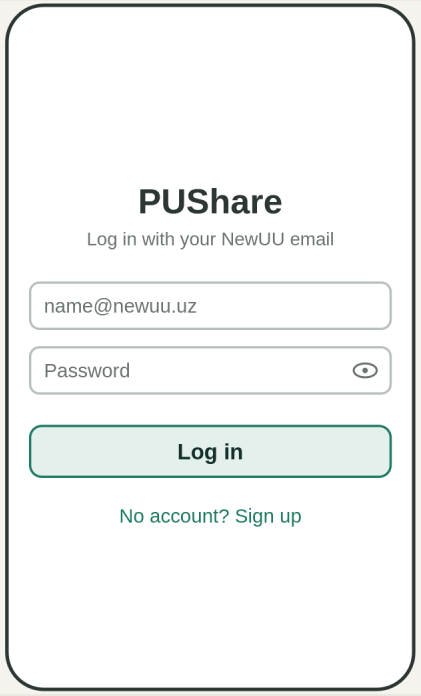

FIND A MATERIAL

1 · Log in with a NewUU email → 2 · Filter on Home → 3 · Open a material → 4 · Download, reopen in Downloads

SHARE A MATERIAL

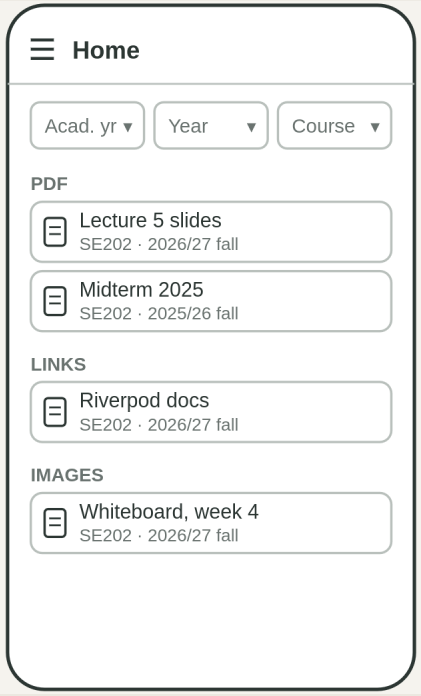

Upload for a course in your major → Pending: an admin reviews it → Accepted or rejected, shown in My uploads

Screens 1–3: finding a material

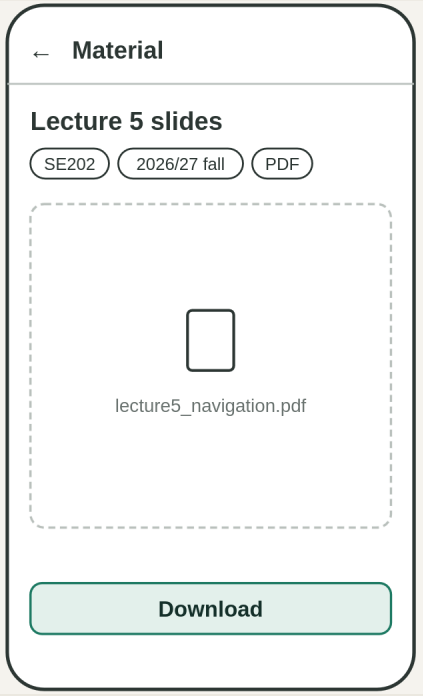

1 · Login

Lets a student in with their @newuu.uz email.

2 · Home

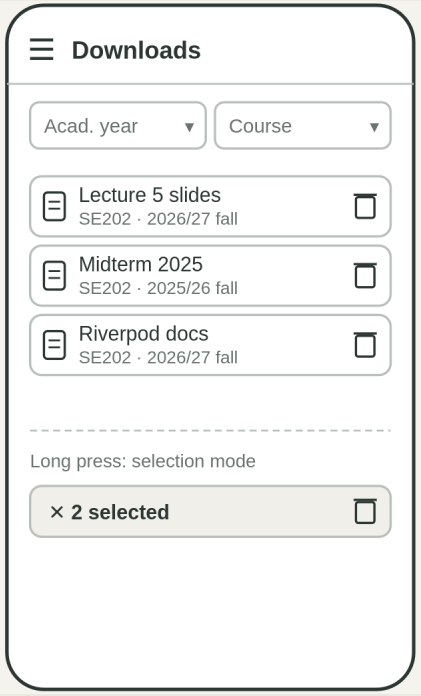

Accepted materials for your major, filtered by year and course.

3 · Material detail

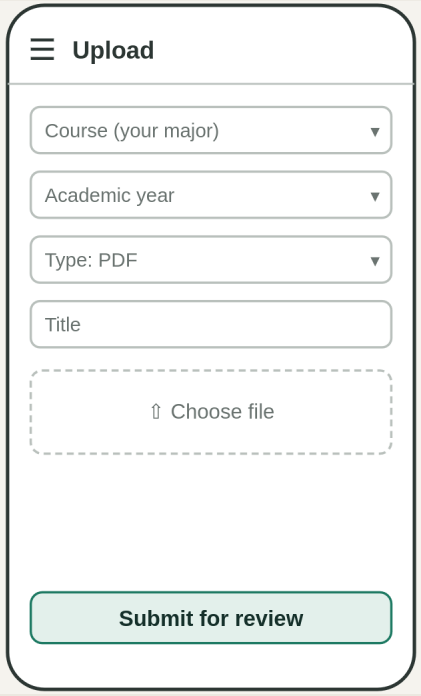

Shows one material and lets you download it.

Screens 4–6: keeping and sharing

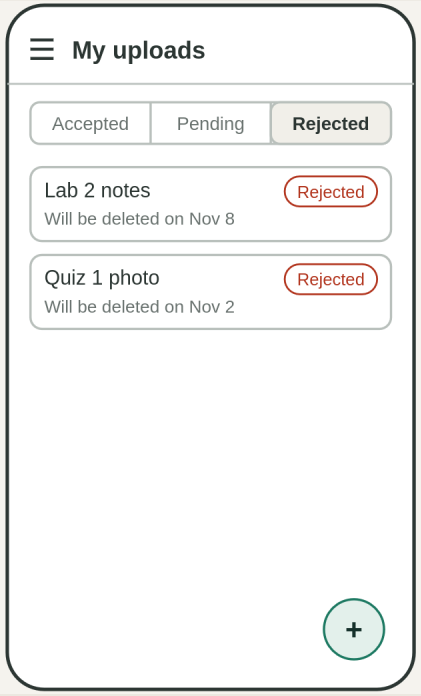

4 · Downloads

Reopen saved materials without searching again.

5 · Upload

Share a material for a course in your major.

6 · My uploads

See whether each upload was accepted, pending or rejected.

Flutter plan

Navigation · go_router

Drawer sections use **context.go**; detail and sub-forms use **context.push**. Detail gets only **/materials/:id**. Confirmation returns a result with **pop(true)**. An auth guard in **redirect** protects routes.

State · Riverpod

Shared state in providers: current user, all materials, Home filters, downloads. One-screen state (fields, controllers, “submitting”) stays local with **setState**. **ref.watch** in build, **ref.read** in callbacks.

Forms and validation

Form + **GlobalKey<FormState>** + **TextFormField**. Email ends with @newuu.uz, password 8+ characters, code exactly 6 digits, links must be valid URLs.

Layout and lists

Home: a **Row** of three **Expanded** dropdowns over an **Expanded ListView.builder**, one flat list of type headers and cards. Sign up wraps its form in **SingleChildScrollView** to avoid keyboard overflow.

Data model and what's out of scope

User
email · major · studyYear · createdAt

Course
id · name · major · studyYear · academicYear · createdAt

StudyMaterial (not "Material": clashes with Flutter)
id · courseId · academicYear · title · type · content · status · uploadedBy · uploadedAt

DownloadRecord
materialId · downloadedAt · localPath

Out of scope for now

- Backend and database
- Sending real email codes
- Admin review panel
- File storage and real downloads
- Push notifications
- StatefulShellRoute
- Voting and AI moderation (later)

Who did what

Abduraxmon Qutbiddinov · lead

Main user flow, screens and wireframes; designed and distributed the survey; assembled and submitted the document.

Umar Toshqulov

Problem statement, target users and the survey report.

Adxamjon Raimov

App concept, out-of-scope list, presentation review and rehearsal.

Oyatillo Axadjonov

Flutter plan and data model; distributed the survey.
